Conclusions

- **Project Outcome**: **vookapp** is a fully functional, production-ready library management system that can be accessed globally.

- **Live Demo**: You can experience the interface and features live at: **https://bookmanagement7thsemester.netlify.app/**.

- The **VOOK** project was successfully designed and implemented as a **React-based Book Management**

- **System**.

- It provides an **easy and user-friendly platform** for reading books online.

- Modern React concepts such as **Hooks, Props, and Higher Order Components** were effectively used.

- **Node.js** and **Express.js** ensured **smooth backend functionality** and **data handling**.

- The project meets all defined objectives and **works reliably**.

Future Scope

- *User login and authentication can be added.*

- *Book search and category filtering can be implemented.*

- *A recommendation system for books can be developed.*

- *The application can be converted into a mobile app.*

- *Cloud deployment and database support can be included for scalability.*
